Product Name: EZ Faucet® Touch-Free Sensor Adaptor
First retail availability: November 2006
Suggested Retail Pricing: \$59.99

What it is:

Makes any existing kitchen and bathroom faucet fully automated by infrared sensor. Just simply mount the patented EZ Faucet Touch-Free Sensor Adaptor to your existing faucet.

How it works:

After mounting to any standard faucet, you simply run your hands (or whatever you are washing, filling, or getting wet) under the faucet and your water comes on automatically. It will then stay on until you move from under the sensor. You can also override the automatic feature by pressing the manual override button. This allows the water to run for three minutes until you press the manual override button again, sending it back to the automatic feature.

Who Cares?

All people especially families with elderly and children.

Why bother?

Make life easier and prevent contamination of germ through touching the faucet and handle. Elderly with Arthritis needs EZ Faucet. Children left water running is history. Also save water up to 70%.
